UNSEENLABS EXPANDS GLOBAL PRESENCE WITH NEW OFFICE IN SINGAPORE

Unseenlabs, the leader in space-based radio frequency (RF) detection, announces the opening of its new commercial office in Singapore in February 2025. This milestone marks a strategic step in Unseenlabs' international expansion, positioning the company closer to the dynamic Asia-Pacific market to meet growing demand for maritime surveillance and RF intelligence.

The establishment of Unseenlabs' Singapore office underscores the company's strategic commitment to enhancing global situational awareness through its cutting-edge radio frequency (RF) detection capabilities. Unseenlabs provides unmatched precision in identifying and monitoring maritime activities, supporting critical operations for defense and security organizations, business intelligence firms, cable operators, insurers, and maritime stakeholders. These capabilities play a pivotal role in addressing key challenges such as IUU fishing, piracy, smuggling, threats to critical infrastructure and national security, ensuring a safer and more secure maritime environment.

Unseenlabs is also thrilled to be the first company in the radio frequency (RF) detection domain to open a commercial office in Singapore, demonstrating its commitment to supporting the region with innovative RF intelligence solutions.

To lead this new chapter, Clément Arata has been appointed as Regional Sales Manager of the Singapore office. With extensive expertise and a proven track record in driving commercial growth, Clément will oversee Unseenlabs' operations in the region. Based in Singapore, he will focus on developing local partnerships, and fostering strategic collaborations.

“This expansion into Singapore represents a key milestone for Unseenlabs. The Asia-Pacific region is a critical hub for maritime activities, and having a physical presence here allows us to better serve our clients with tailored solutions,” said Clément Arata. “We are committed to contributing to the safety, security, and sustainability of the region’s maritime environment through our innovative RF detection technology.”

LOCAL GROWTH AND TALENT DEVELOPMENT

To support its growing presence in Asia-Pacific, Unseenlabs plans to recruit local talent throughout 2025, further strengthening its commercial activity and regional presence.

The opening of the Singapore office and the planned multi-domain constellation reflect Unseenlabs’ mission to deliver RF intelligence on a global scale. With its constellation of 16 satellites, set to expand further in the coming years, Unseenlabs continues to set new standards for RF-based surveillance.

FUTURE DEVELOPMENTS: MULTI-DOMAIN CONSTELLATION IN 2026

Unseenlabs recently announced the planned deployment of a new multi-domain constellation starting in 2026, which will expand its monitoring capabilities beyond maritime surveillance to include terrestrial and space domains. This strategic development positions Unseenlabs at the forefront of RF intelligence innovation, addressing growing global demands for comprehensive situational awareness.

Furthermore, Unseenlabs will continue to expand its current maritime-focused constellation in 2025, with several launches planned throughout the year.

About unseenlabs

Unseenlabs is the leading provider of radio frequency (RF) data and solutions for maritime surveillance. Its unique proprietary technology can geolocate and characterize any vessel at sea, at anytime, anywhere in the world and in any weather condition. Unseenlabs provides its customers with high value-added data and solutions to combat illegal activities at sea. Unseenlabs’ solutions are a world reference in this field.
